ENERGY

Project Objective and Goals

- Project Objective: Identify and access statewide resources for potential CO₂ storage via mineralization processes, including basalt formations and related stratigraphic units, and mining wastes in the state of New Mexico, as well as identify and characterize potential targeted storage sites/complexes to provide insights on storage capacity.

- Project Performance Dates: 09/04/2023 – 09/03/2025

- Tasks:

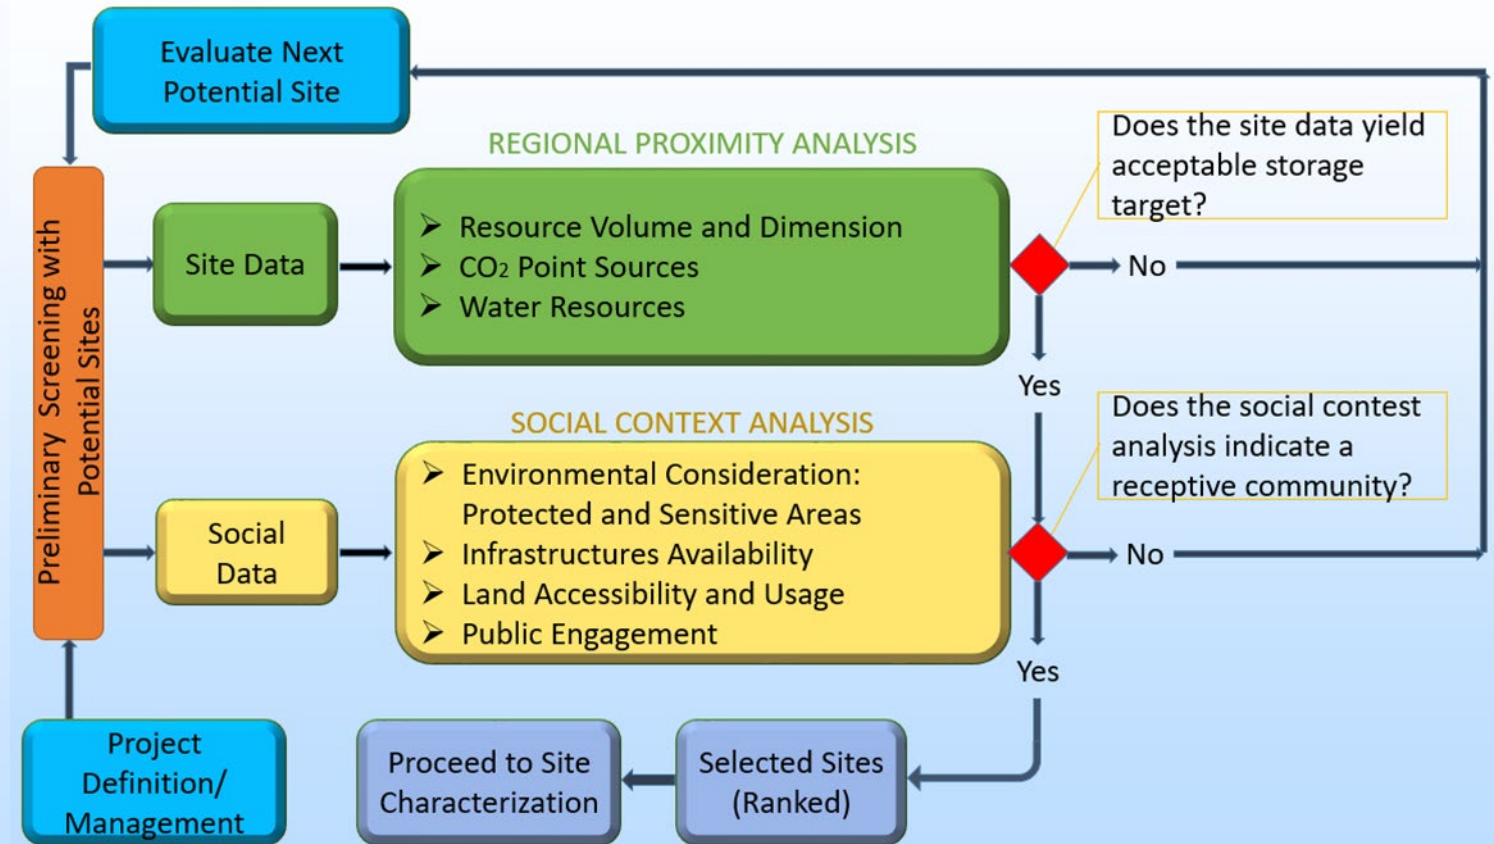

Technical Update

Site Selection-Surface/Near-surface Basalt

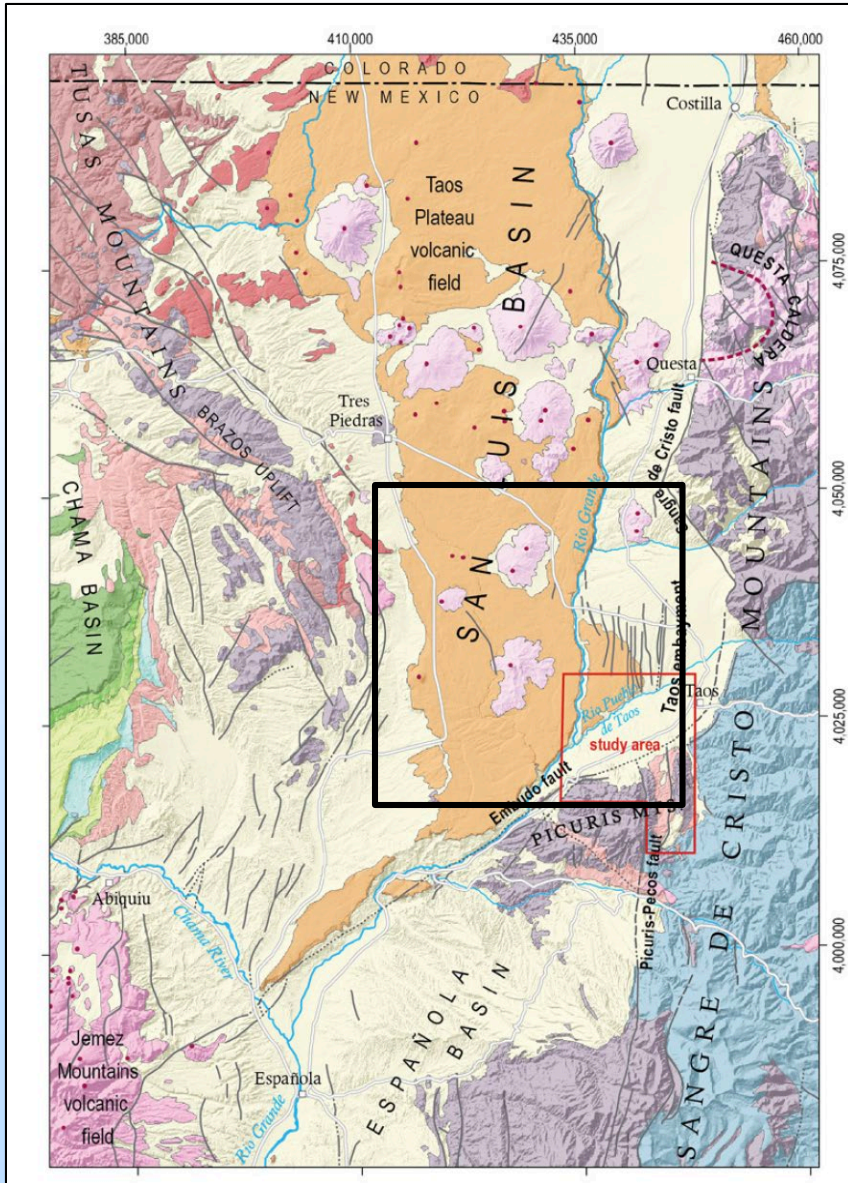

Geographical distribution of the basaltic rock in New Mexico

Site Suitability: Decision criteria are relevant to the specifics of CCUS via mineralization projects, such as: geologic formation volume, presence of divalent cation, proximity to sensitive areas, land access, CO₂ sources, surrounding water resources, infrastructure availability and public engagement, etc.

Technical Update

Taos Plateau Volcanic Field - Introduction

>6.0 Ma to 1.0 Ma

~2,500 km²

~250 km³

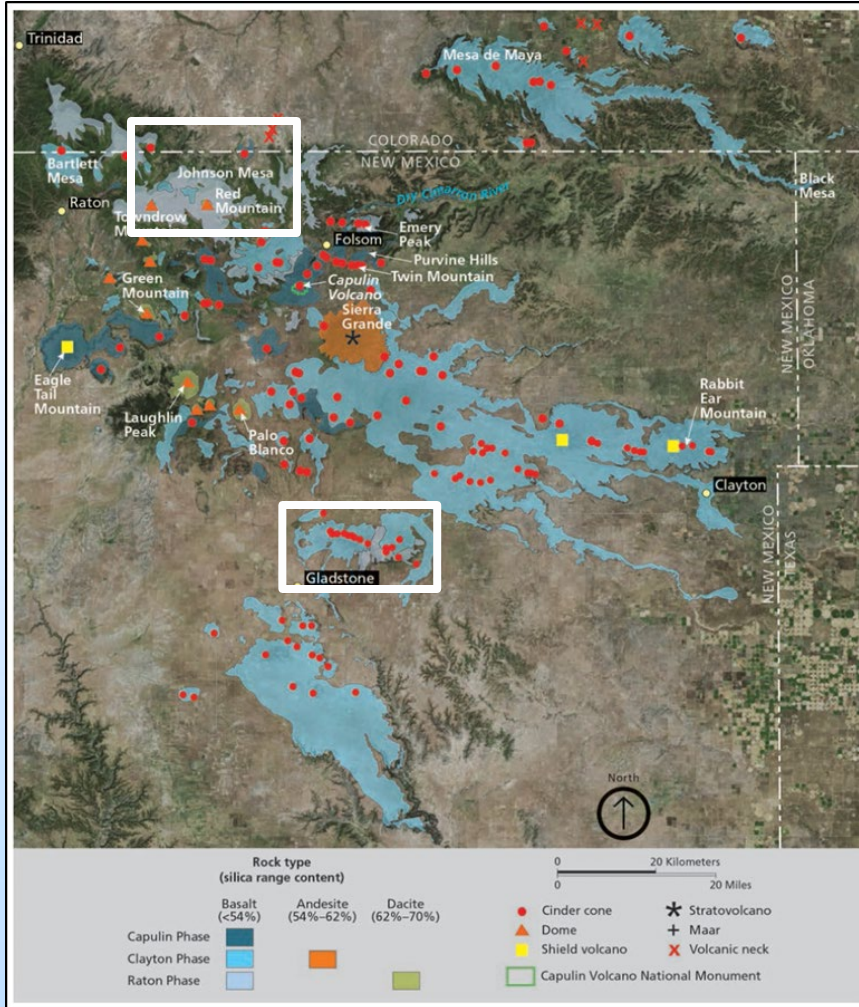

35-50 exposed
volcanoes (more buried)

Compositionally diverse

Late Cenozoic field in
NM

Technical Update

Raton-Clayton Stratigraphy

Geologic Age	Stratigraphic Unit	General Rock Type(s)	Avg. Thickness	
Quaternary	Raton-Clayton-Capulin volcanics	Eolian sand sheets, dune and alluvial deposits.	-0-30 m	
		Dark gray to black basalts, cinder cones and fissure vents ranging in age from ~ 36 ka - 9 Ma. Incl. Sierra Grande: med. gray andesite, ~2.6-3.8 Ma.		
Miocene-Pliocene	Ogallala Fm.	Reddish-brown to tan coarse-grained sand with local lenses of pebble to cobble conglomerate. Heavily bioturbated. Locally capped by well-developed calcrete.	0 - 200 m	
Cretaceous	Smoky Hill Marl (Niobrara Fm.)	Dark gray silty to sandy shale with thin beds of limestone and marl.	305 m	
	Ft. Hays Ls.	Pale gray medium bedded limestone	15 m	
	Carlile Shale	Dark gray shale with thin limestone beds in upper section.	61 m	
	Greenhorn Ls.	Gray shale and pale gray medium-bedded micrite beds.	9 m	
	Graneros Shale	Medium gray shale with thin fossiliferous limestone beds.	38 m	
	Dakota Group	Romeroville Ss.	Yellowish-gray medium-grained, locally pebbly sandstone.	0-8 m
		Pajarito Shale	Medium gray shale.	10-20 m
		Mesa Rica Ss.	Brownish-yellow persistent medium grained, cross-bedded sandstone.	33 m
		Glencairn Fm. Lytle Ss.	Gray to dark gray shale, siltstone and sandstone. Light gray conglomeratic cross-bedded sandstone.	22 m 10-20 m
	Jurassic	Morrison Fm.	Gray-green and red mudstone with locally thick medium to coarse-grained sandstone and thin micrite beds.	52-168 m
Bell Ranch Fm.		Dark brown mudstone with nodules of alabaster.	0-8 m	
Exeter Sandst.		White to pale pink cross-bedded sandstone.	0-24 m	
Late Triassic	Dockum Group	Sheep Pen Ss.	Light-brown, thin-bedded sandstone.	0-33 m
		Sloan Canyon Fm.	Red and pale gray-green mudstone with lenses of medium-grained sandstone.	0-46 m
	Travesser Fm.	Reddish-brown siltstone and sandstone with local intraformational conglomerate lenses.	75-168 m	
	Baldy Hill Fm.	Purple, red and green mottled mudstone with lenses of coarse-grained sandstone. Base not exposed.	> 30 m	

Eruptions between ca. 9 Ma and 37 ka

~140 vents (mostly cinder cones)

7,000-10,000 km²

~100-200 km³

Compositionally diverse (not as much as TPVF)

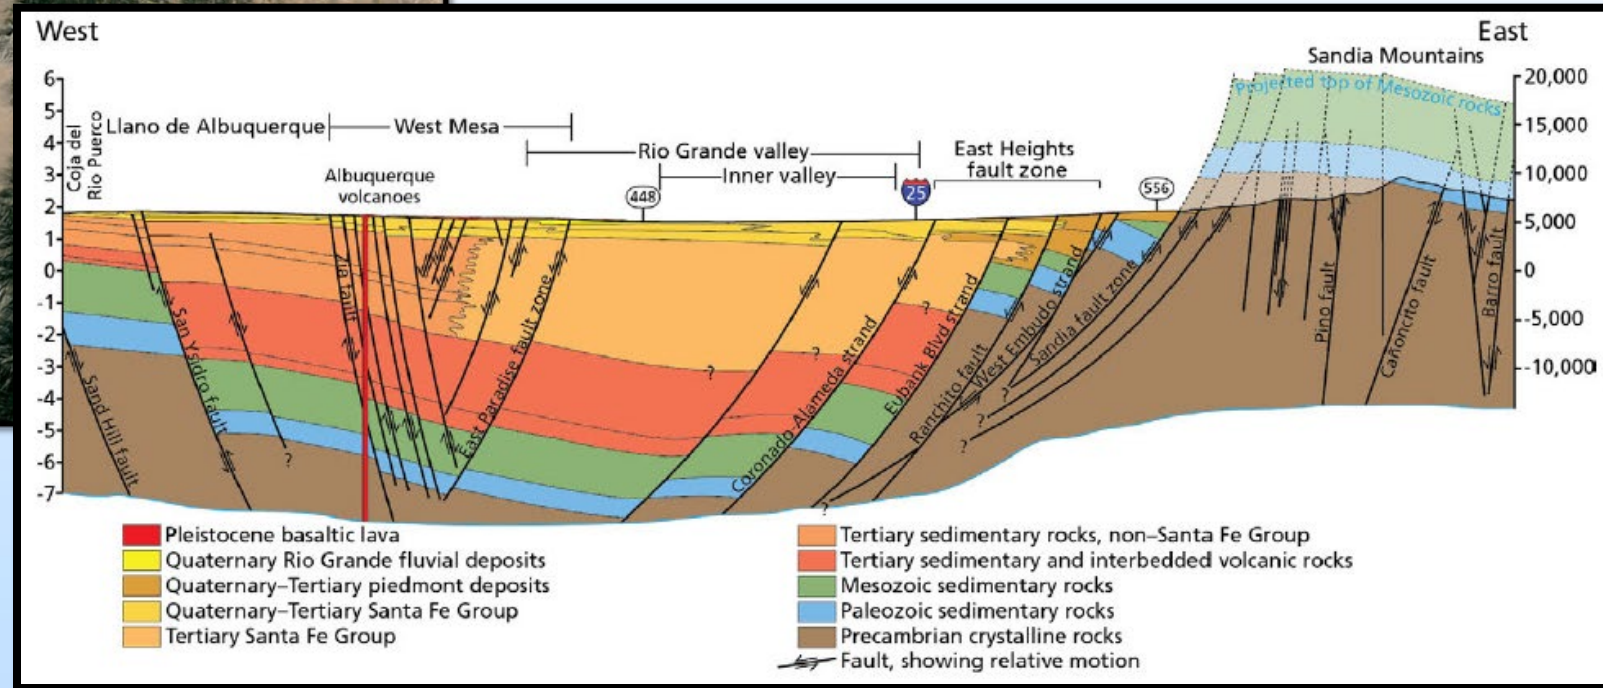

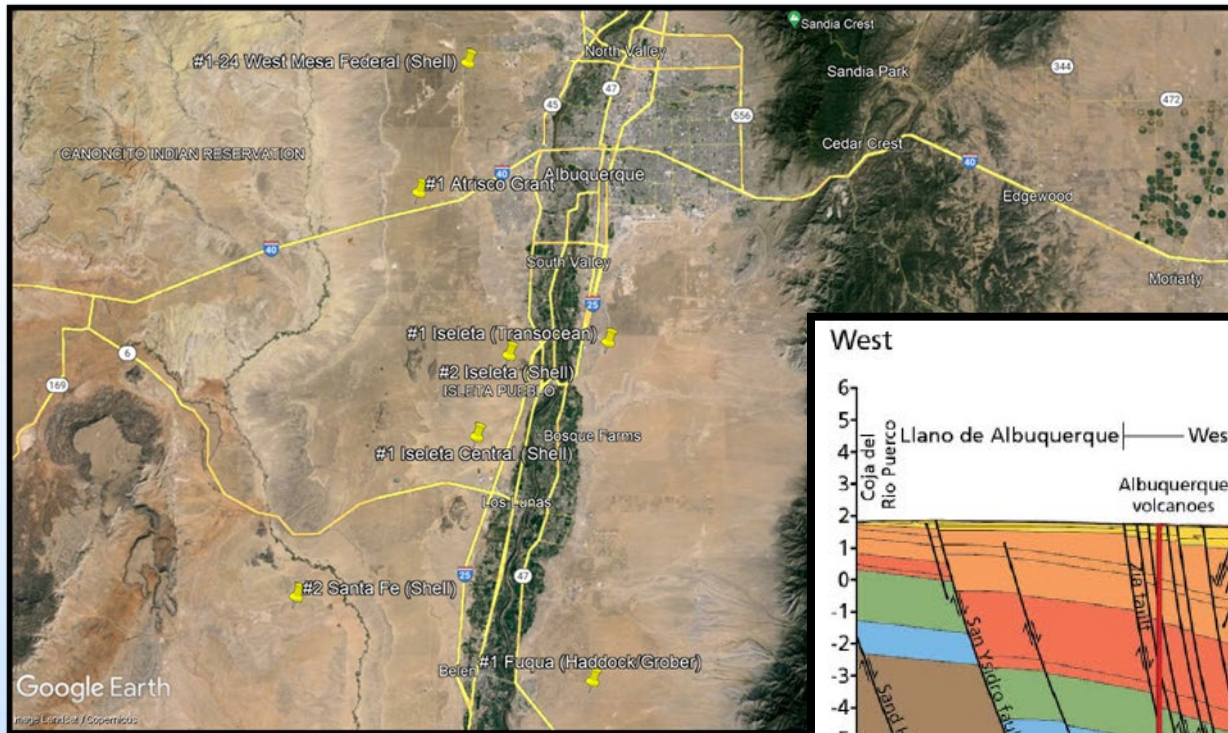

Approximately 1,200 feet of section contains numerous "horizons" of igneous rocks

Two regions of interest: Johnson Mesa & Don Carlos Hills

Technical Update

Subsurface Basalt – Albuquerque Basin

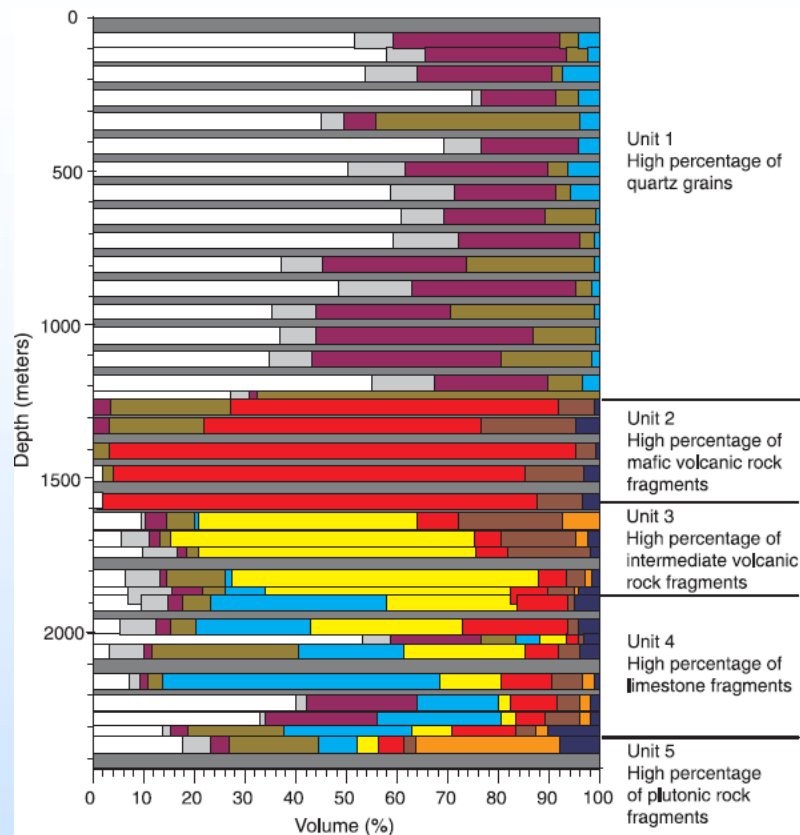

- Albuquerque Basin is a sub-basin in the Rio Grande Rift
- Wells with potential Basalt zones
- Most of the wells have cuttings or core available
- Shell #2 Isleta & Carpenter #1 Atrisco Grant (Arrows) may have the greatest potential

Technical Update

Other subsurface basalt in NM?

Yates #2 La Mesa well located within the southern Española Basin, west of Santa Fe, New Mexico

Designation of lithostratigraphic units based on well-cutting compositions

	Espinaso Formation alkaline latite ¹ wt %	calc-alkaline latite ¹ wt %	Cieneguilla basanite basalt ² wt %	basanite (limburgite) ² wt %
SiO ₂	54.42 ± 5.24	59.25 ± 2.74	45.81	40.18
Al ₂ O ₃	16.89 ± 1.65	17.13 ± 0.85	14.08	11.7
FeO	7.12 ± 2.52	5.83 ± 1.32	7.41	6.68
MgO	2.54 ± 1.23	1.95 ± 0.58	8.79	14.3
CaO	6.48 ± 2.05	5.57 ± 0.64	9.45	13.28
Na ₂ O	3.8 ± 0.73	3.97 ± 0.46	2.49	3.48
K ₂ O	3.97 ± 0.77	2.65 ± 0.64	0.86	0.76
TiO ₂	1.41 ± 1.09	0.73 ± 0.18	1.63	2.66
P ₂ O ₅	0.42 ± 0.26	0.25 ± 0.06	0.28	0.68
MnO	0.18 ± 0.03	0.15 ± 0.03	0.19	0.08

Harnessing Potential: Pioneering CO₂ Storage through Strategic Resource Assessment

Welcome to the Regional Resource Assessment for CO₂ Storage Project!

The "Regional Resource Assessment for CO₂ Storage in New Mexico and Surrounding Areas" project aims to identify, characterize, and evaluate potential sites for CO₂ storage through mineralization processes.

This initiative focuses on basalt formations, related stratigraphic units, and mining wastes to provide a comprehensive understanding of storage capacities and potential benefits.

Our goal is to identify and assess New Mexico state resources for potential CO₂ storage via mineralization, focusing on basalt formations and related stratigraphic units, as well as mining wastes.

Workshop in preparation

- November 7th-8th, 2024 in Socorro, New Mexico
- The event gather around 100 energy stakeholders from NM
- Collaboration with the Consortium for Sustainable Energy and Advanced Management (CESAM)

<https://nm-secm.org/outreach/>

Consortium for Energy Sustainability and Advanced Management (CESAM)

CESAM Launch Event
November 7th - 8th

LOCATION : New Mexico Tech, 801 Leroy place, 87801 Socorro, NM

REGISTRATION : Coming soon

Energy Research and Collaboration
Outreach and Community Engagement
Education and Workforce development

Contact information: jean-lucien.fonquergne@nmt.edu

Consortium for Energy Sustainability and Advanced Management (CESAM)

Day 1, November 7th:

- Panel: Overview of NM Universities and National Laboratories Energy Research, Education and Outreach

To be confirmed:

- Navajo Technical University
- Sandia National Lab
- University of New Mexico

- Panel: Overview of NM Energy Partnerships

To be confirmed:

- Four Corner Energy Alliance
- AzCaNE
- Four Corner RRT

- Panel: Solar, Wind and Storage
- Panel: Subsurface Energy and Storage
- Panel : Carbon Management

Day 2, November 8th:

- Panel: Mining Innovations and Challenges
- Panel: Nuclear Research in New Mexico
- Panel: The Role of Water in Energy
- Panel: Environmental Sustainability
- Panel: Education and Community Engagement

Outreach Activity

Article in development

- Will be released in the Outcrop magazine published by the Rocky Mountain Association of Geologists in November 2024. <https://www.rmag.org/>
- Another in preparation for Spring, 2024 for the Lite Geology Magazine (NMT)

Turning CO₂ into Stone: The Potential and Challenges of CO₂ Mineralization for Carbon Sequestration

To combat climate change, humanity is turning to innovative technologies to reduce atmospheric carbon dioxide (CO₂) levels. Among these, CO₂ mineralization for Carbon Capture and Sequestration (CCS) stands out as a promising solution. This process not only captures CO₂ emissions from industrial sources and the atmosphere but also permanently stores them in solid minerals, preventing them from subsurface leakage and contributing to global warming. This article delves into the importance of CO₂ mineralization, highlights its implementation on an industrial scale, explains its principles, contrasts it with other sequestration methods, outlines its advantages and challenges, and presents a recent project in New Mexico, led by New Mexico Institute of Mining and Technology, aiming to harness this technology for environmental sustainability.

Why CO₂ mineralization is a necessity

The concentration of CO₂ in the atmosphere has surged to levels not seen in millions of years, primarily due to human activities such as fossil fuel combustion and deforestation. This increase in greenhouse gases is a major driver of climate change, leading to extreme weather events, rising sea levels, and a loss of biodiversity. Thus, reducing atmospheric CO₂ levels is crucial. CO₂ mineralization offers a way to effectively removing it from the atmosphere for millennia.

Community Engagement

- Initial Assistance & Validation Meeting, November 9, 2023
- Outreach and engagement with land owners from the Don Carlos hill and Johnson Mesa, near the sites of interest. More than 15 landowners engaged via meetings, phone calls or mail.
- Engagement with Freeport, mining company.
- Contact with University of Eastern New Mexico for outreach event.
- Engagement with students and New Mexico communities at the Science Café in Socorro, NM.

Great outreach day today at the Science Café organized by the New Mexico Bureau of Geology Mineral Technology !

It was a fantastic opportunity for everyone to dive into the world of science through fun and engaging activities.

We discussed our Carbon Capture and Storage (CCS) projects, the process of CO₂ mineralization, and looked at beautiful calcite samples. Thanks to all who joined us and contributed to these conversations about our planet's future.

Kudo Cynthia Connolly and all the people involved in the organisation the event!

#ScienceForEveryone #Geology #CCS
#CO₂mineralization
